Deep Learning

CSCI 481

Last modified: 2026-10-22

Preface

This website collects the lecture notes for CSCI 481[1], "Deep Learning", as taught in Spring Quarter 2027 at Western Washington University[2] by Douglas Ezra Morrison[3].

The course follows the module sequence of Brian Hutchinson[4]'s CSCI 481/581, which he taught from Winter 2021 to Winter 2026.

CSCI 481 builds on DATA 371/471, Machine Learning. Where these notes use an idea that course covers, such as generalization, gradient descent, or logistic regression, they link to its definition in *Machine Learning for Data Science* (lds)[5] rather than defining it again.

The Calendar lists the topics week by week, and the Syllabus gives the course's policies. The main reference text is *Deep Learning* [1], which can be read at no cost on the book's webpage[6].
